

HUMAN-COMPUTER INTERACTION1

(HUMCOM1)

Topic(s):	Introduction to Git Flow and Web Deployment					
Laboratory Activity No.	04			No. of Hours:	30 minutes	
Start Date:	FEBRUARY 03, 2026			Due Date:	FEBRUARY 03, 2026	
Approach:	☒	Individual	☐	Group		
	☐	Online	☒	Onsite	☒	Hybrid
Name(s): <i>Lastname, First Name Arranged in alphabetical order</i>	Agoo, Christian Payapaya					

I. Prerequisites

- Students should have:
- a. Successful completion of Laboratory Activity No. 03.
 - b. A registered GitHub account.
 - c. Access to the project files from Activity 2/3.

II. Learning Objective

At the end of this laboratory activity, the student must be able to:

Learning Objectives	Aligned Course Learning Outcomes (CLOs)
1. Implement a professional Git workflow using the terminal (init, add, commit, push).	CLO 3
2. Deploy a functional web interface via GitHub Pages using the <code>index.html</code> naming convention.	CLO 3
3. Manage user identity and authentication within a version control environment.	CLO 3

III. Setup and Procedure

- Mandatory
- Software Environment:**
- Visual Studio Code, Notepad++, or Notepad
- Hardware Environment**
- PC/workstation

IV. Problem/Procedure

Annex A for the problem description.
Annex B for the detailed procedure.

V. Additional Instructions

- a. Critical Naming & Submission -Case Sensitivity: Remind students that `index.html` must be lowercase. GitHub Pages on Linux servers will not automatically recognize `Index.html` or `INDEX.HTML`, resulting in a 404 error.
- b. Submission Formatting: Students must use the provided template to include their activity output/screenshot, source code, and reflection.
- c. Local Drive Backup: In addition to the GitHub link, students should submit the final `.html` file to the

- designated laboratory drive as a secondary backup.
- d. Individual Effort: This is an Individual approach activity.
- e. Zero Tolerance: Any student found with a similar output or identical repository history to another student will be marked zero.
- f. Asset Management: Ensure students have their social media icons/logos in `.jpg` or `.png` format ready in the same folder as their `index.html`.

- g. Code Cleanup: Before pushing to GitHub, students should ensure their internal CSS (using `<style>` tags in the `<head>`) is clean and properly modifies typography and alignment.

VI. Rubric/Scoring Guide

Criteria	10 Points (Excellent)	5 Points (Good)	0 Points (No Effort)
Git Workflow	Successfully executed <code>init</code> , <code>add</code> , <code>commit</code> , and <code>push</code> via terminal with professional messages.	No Git repository or version history present.	No Git repository or version history present.
Deployment & UX	GitHub Pages link is live and loads the site immediately due to correct <code>index.html</code> naming.	No live deployment link provided.	No live deployment link provided.
TOTAL			__ / 20 Points

VII. Reflection

In this section, you will write a brief reflection on your learning. Answer the following guide questions:

1. What happens if the file name in your GitHub repository does not exactly match "index.html"?

The github file website will not load properly. The message 404 error will show up

2. Why is it important to configure your `user.name` and `user.email` before making a commit?

Git records who made every single change. Its lilke working with a team, you will now who made the recent changes.

VIII. References

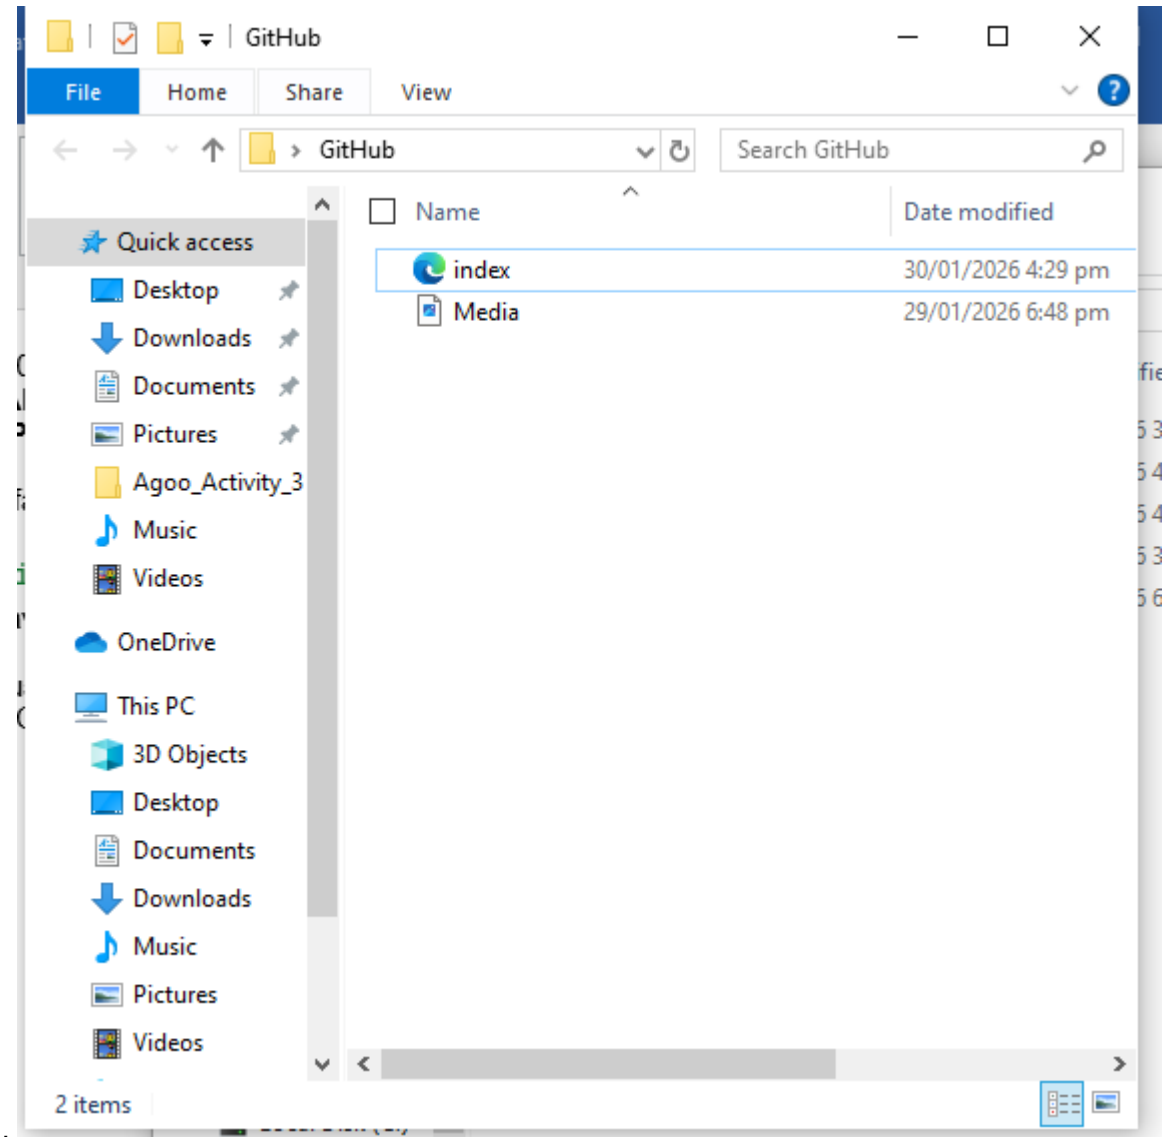

- **W3Schools.** (n.d.). *HTML Introduction*. W3Schools Online Web Tutorials.
- **Mozilla Developer Network (MDN).** (n.d.). *Getting started with HTML*. MDN Web Docs.
- **GitHub Docs.** (2026). *Getting started with GitHub Pages*. GitHub Documentation.
- **Git-SCM.** (2026). *Git Setup and Configuration Basics*. Official Git Documentation.

I encouraged you to review these references during your "At-Home Practice" phase. Specifically, the MDN Web Docs will assist with CLO 3 (Internal CSS styling), while the GitHub Docs will help you troubleshoot the Deployment process if they encounter a 404 error.

Instructions: Convert your previous "About Me" interface into a live web portal.

Constraints:

- **Modify:** Rename your previous activity file to `index.html`.
- **Navigation:** Ensure your `<ul>` and `<li>` navigation menu is functional and links to at least 5 personalized social media profiles.
- **Visual Signifiers:** Use graphical icons as visual signifiers for your links.
- **Deployment:** The project is only considered "Complete" once the live URL is generated and accessible by the faculty.

Procedure:

1. **File Preparation:** Open your project folder from Activity 2 or 3. Rename your main file to **index.html** to ensure it serves as the default homepage for the server. Make sure you already created your git account.
2. **Identity Configuration:** Open the terminal in VS Code and set your identity:
 - `git config --global user.name "Your Full Name"`
 - `git config --global user.email "your@email.com"`
3. **Local Repository Initialization:** Run `git init` to start tracking your project.
4. **The Commit Cycle:**
 - Stage all files: `git add .`
 - Save locally: `git commit -m "Activity 4: Professional Git Flow and Deployment"`
5. **GitHub Deployment:**
 - Create a new repository on GitHub named **HCI_PRACTICE_DEPLOY**.
 - Link it: `git remote add origin [Your_Repo_URL]`.
 - Push: `git push -u origin main` (Sign in via browser if prompted).
6. **Live Site Activation:** Go to **Settings > Pages** in your GitHub repository. Select the main **branch** and click **Save**.

Final Submission Format Reminder

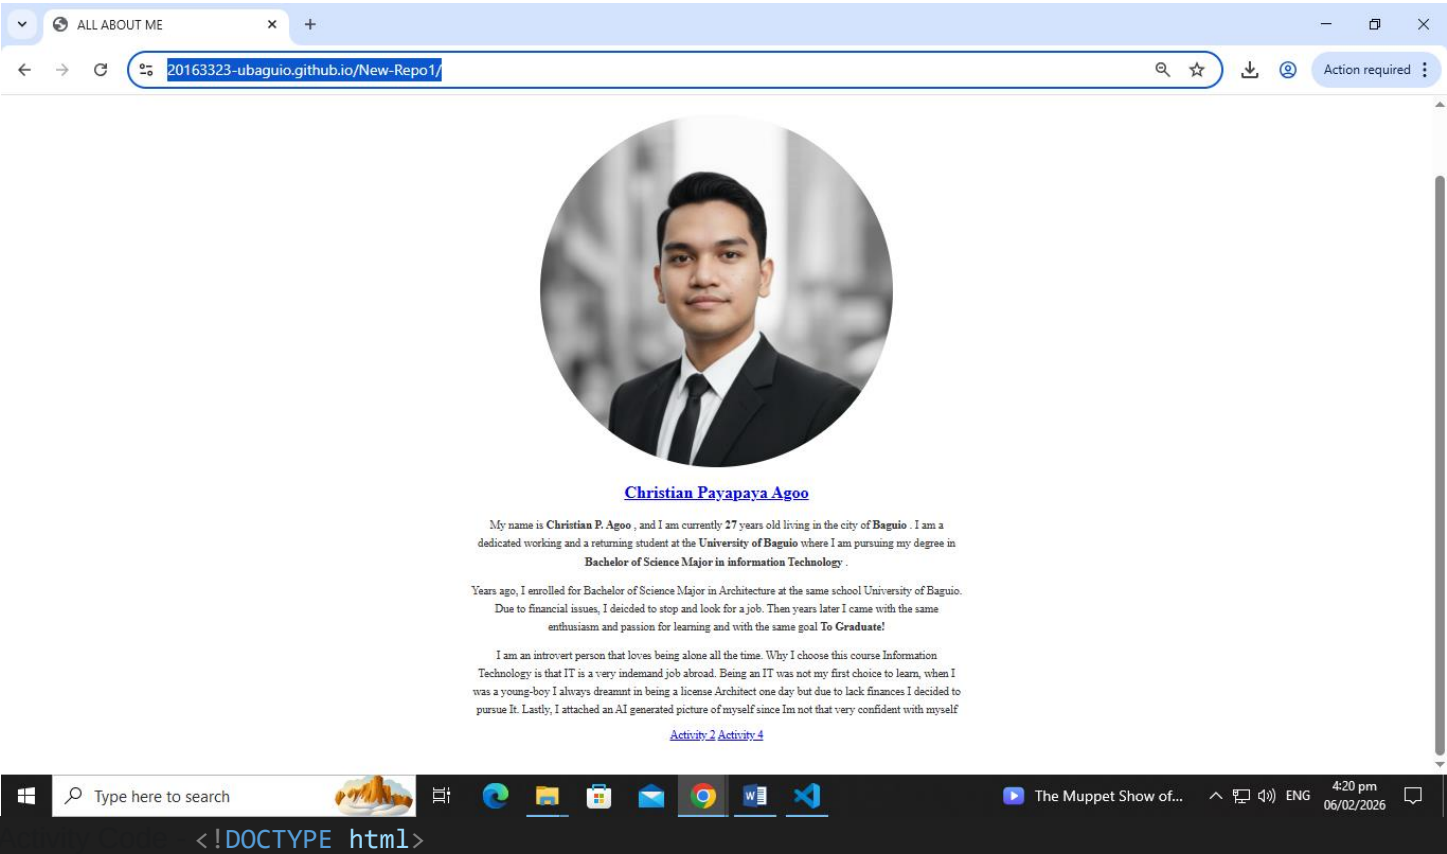

As per the mandatory instructions in SIT-FO-045:

- Required Sections:
 1. **Activity Output** (Screenshot of the live site)
 2. **Activity Code** (The full HTML/CSS source)
 3. **Activity Reflection** (Answers to the guide questions)

<h1>All About Me</h1>

<h2><a href="#" class="Activity2_About Me_Agoo.html,Activity4_About Me_Agoo.html"> Christian
Payapaya Agoo</a></h2>

<p> My name is <strong> Christian P. Agoo </strong>,
  and I am currently <strong> 27 </strong> years old living in the city of <strong> Baguio
</strong>.
  I am a dedicated working and a returning student at the <strong> University of Baguio
</strong> where I am pursuing my degree in <strong> Bachelor of Science Major in information
Technology </strong>.</p>

<p> Years ago, I enrolled for Bachelor of Science Major in Architecture at the same school
University of Baguio. Due to financial issues, I decided to stop and look for a job. Then
years later I came with the same enthusiasm and passion for learning and with the same
goal<strong> To Graduate! </strong>

<p> I am an introvert person that loves being alone all the time. Why I choose this course
Information Technology is that IT is a very indemand job abroad.

```

```
    Being an IT was not my first choice to learn, when I was a young-boy I always dreamnt in
    being a license Architect one day but due to lack finances I decided to pursue It.
    Lastly, I attached an AI generated picture of myself since Im not that very confident
    with myself</p>
